Applicant: Damian Fiolka et al. Attorney's Docket No.: 20228-0013US1 / 06 179

Serial No.: 10/580,698

Filed: November 29, 2006

Page : 2 of 8

## Amendments to the Specification:

Please replace the abstract with the following amended abstract:

A polarization-modulating optical element (1) consisting formed of an optically active crystal material has a thickness profile where the thickness, as measured in the direction of the optical axis, varies over the area of the optical element. The polarization-modulating optical element (1) has the effect that the plane of oscillation of a first linearly polarized light ray and the plane of oscillation of a second linearly polarized light ray are rotated, respectively, by a first angle of rotation and a second angle of rotation, with the first angle of rotation and the second angle of rotation being different from each other.
